DETAILED ACTION

Page 2

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Applicants are reminded that although the process claims 2 and 3 (as presented) depend from the broader claim 1, the broader claim 1 is in fact directed to a product composition, not to a process of treating building materials, and therefore, instant claims 2 and 3 have been treated as distinct process claims for the purposes of this office action.

- I. Claim 1, drawn to **a product** comprising a combination of ingredients designed to prevent and inhibit fungal infestation, classified in class 435, subclass 243 and others depending on the components used in the composition.
- II. Claim 2, drawn to a process, wherein the step of treatment is performed using standard spray application methods with liquid particles greater than 15 microns being applied to common building materials, classified in class 424, subclass 94.1 and others.
- III. Claim 3, drawn to a process, wherein the step of treatment is performed using an atomization or fumigation misting of said common buildings with liquid particles less than 15 microns, classified in class 424, subclass 94.1 and others.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of group I and groups (II and III) are related as product and processes of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with

Application/Control Number: 10/731,641

Art Unit: 1651

another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case the product of group I, as claimed (i.e. a liquid composition comprising fungiderived enzymes and catalysts that break down the polysaccharide cell walls; see specific recitation in instant claim 1) can be used in a materially different process of using that product such as processes for enhancing the biodegradability of fibrous plant materials, for example, food/feed for animals (see TRICARICO et al, US 6,750,051 B2; [A]; teach a fungi-derived enzymatic compositions; see abstract and claims, in particular).

Page 3

- 3. Inventions of group II and III are patentably distinct from each other because they recite different and distinct method steps, which require distinct components, and which lead to different and distinct results/end points. The invention of group II is drawn to a process of treating common building materials using standard spray application methods, whereas, the process of group III requires the limitation of using an atomization or fumigation misting of the said common building materials with liquid particle sizes of less than 15 microns, which is not required by the invention of group II.
- 4. The inventions listed above are independent and distinct from one another as they have acquired a separate status in the art and require independent searches, particularly with regard to the literature searches. Clearly, a reference that would anticipate one of the above groups would not necessarily anticipate or even make obvious any of the others. An undue burden would ensue from the examination of

Art Unit: 1651

multiple methods, which have distinct steps and end points. Burden lies not only in the search of US Patents, but in the search for literature and foreign patents and examination of the claim language and specification for compliance with the statutes concerning new matter, distinctness, scope of enablement, and double patenting issues.

Because these inventions are distinct for the reasons given above and the literature search required for one Group is not required for the other group, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

5. The examiner has required restriction between **product and process claims**. Where applicant elects claims directed to the product, and a product claim is subsequently found allowable, withdrawn process claims that depend from or otherwise include all the limitations of the allowable product claim will be rejoined in accordance with the provisions of M.P.E.P. § 821.04. **Process claims that depend from or**

Art Unit: 1651

otherwise include all the limitations of the patentable product will be entered as a matter of right if the amendment is presented prior to final rejection or allowance, whichever is earlier. Amendments submitted after final rejection are governed by 37 C.F.R. 1.116; amendments submitted after allowance are governed by 37 C.F.R. 1.312.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 C.F.R. 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35U.S.C. §§101, 102, 103, and 112. Until an elected product claim is found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowed product claim will not be rejoined. See "Guidance on Treatment of Product and Process Claims in light of *In re Ochiai, In re Brouwer* and 35 U.S.C. § 103(b)," 1184 O.G. 86 (March 26, 1996). Additionally, in order to maintain the right to rejoinder in accordance with the above policy, Applicant is advised that the process claims should be amended during prosecution either to maintain dependency on the product claims or to otherwise include the limitations of the product claims. Failure to do so may result in a loss of the right to rejoinder.

Further, note that the protection against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See M.P.E.P. § 804.01.

Art Unit: 1651

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Satyendra K. Singh whose telephone number is 571-272-8790. The examiner can normally be reached on 9-5MF (alternate Fridays OFF).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael G. Wityshyn can be reached on 571-272-0926. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
